Oct 21/65

06:31
06:38

Moon in haze - Tail as bright as the haze
around the moon -
looked like contrail of jet.

Tail has slight bend about half way of visual part.
7x50 binoculars.

Width of Tail $\frac{1}{3}$ apparent diameter of hazed
over moon.

My first look at tail - thought it was Ray of
Aurora.

LOUIS R. DUCHOW
