## Asterisms in IAU Constellations:

From the beginning of this World Asterisms project, we've been keeping track of how many of the over 17,000 asterisms we've listed so far are associated with each of the 88 IAU constellations. This is recorded under each constellation listed in the Handbook, but we've also created the table below to show these statistics. In some cases, we know that a peoples had a particular asterism, but we do not yet know precisely where it was located in the sky: In this case they are listed under the "unknown" category at the bottom of the list. As research continues asterisms will hopefully get moved from this list to the appropriate constellation.

Creation of asterisms began with unaided visual observing by our ancestors. You can clearly see how brighter constellations got more attention than dimmer ones. Some of those dimmer constellations were created to fit into the zodiac. After optical aids such as telescopes and binoculars came into use, the number of asterisms beyond the view of the unaided eye increased, and this began to show which constellations had nebulae, clusters, and galaxies to view. Most recently technical advancements in astrophotography and the use of space telescopes has revealed even dimmer objects, many of which end up with names due to human pareidolia. In 2025 I started recording how many asterisms in each constellation were visible to the unaided eye VS telescopic observations.
