Elyria, Ohio

HARVARD COLLEGE OBSERVATORY  
ANNOUNCEMENT CARD 1473

NOVA.- Dr. J. Vinter Hansen at Copenhagen  
has cabled that Dr. S. Rosseland report-  
ed the discovery by Hassel of a nova as  
follows:

UT 4<sup>h</sup> 30<sup>m</sup> March 7, 1960      Mag. 5

a = 18<sup>h</sup> 57<sup>m</sup> (1855)      d = -13° 00'

March 9

Fred L. Whipple

The above is all we know so far. Congratulations to Hassel, sorry  
the congratulations couldn't have been to you, dear reader and (?) observer.  
If not an observer in our Nova Search Division of the A.A.V.S.O., just drop me  
a line. If you claim you ARE an observer, just drop us the observations at the  
end of the month. Thanks. In the meantime remember there will be more - - -

Keep Looking,

*George Diedrich*

NOVA SEARCH PROGRAMME

In this programme the Montreal Centre cooperates with the Nova Search Division of the A.A.V.S.O. As the name indicates, the purpose of the programme is to detect novae by the systematic observation of those sections of the sky where novae most frequently appear. The sky is divided into areas approximately ten degrees square and two areas are assigned to each observer who, as the seasons change, concentrates on the area visible at that time of year. The procedure is as follows:-

The observer first makes a chart of his area by referring to some reliable star atlas. This chart should show stars down to 6th or 7th magnitude and should indicate the magnitude of each. With the aid of binoculars he then observes the area, noting the relative brightness of the stars and comparing them with the magnitudes shown on his chart. After a few observations he becomes thoroughly familiar with his area and thereafter he watches for any fluctuations in brightness or for the appearance of a star not shown on his chart.

The observer is expected to make one observation every clear night. Lest he become discouraged, he should be warned that he will observe for many a night without seeing anything unusual. Negative observations are important, however, and should be recorded on the monthly report form supplied for this purpose. It will be noted that the form provides space for recording time and magnitude. In recording the time, the 24-hour system, beginning with "0" at midnight, is used so that there is no confusion regarding "a.m." and "p.m." The magnitude shown for each observation is the magnitude of the faintest star that the observer can check with confidence on that particular night. For instance, although he might normally check all stars in his area down to magnitude 6.5, seeing conditions might sometimes limit observation to stars of magnitude 5 or brighter.

Reports of negative observations should be mailed to the Chairman of the Nova Search Section promptly at the end of each month. If or when the observer sees ANYTHING UNUSUAL in his area, however, he should PHONE THE CHAIRMAN IMMEDIATELY. The chairman in turn will notify the A.A.V.S.O. and alert other observers so that the upward curve of the nova can be followed as closely as possible by as many observers as possible.

Any members who would like to participate in this programme are invited to contact the Chairman and areas will be assigned to them. The only equipment needed is a pair of binoculars.

Chairman, Nova Search Section  
Observation Committee, Montreal Centre
